

# Advanced Report Manager

Introducing the Advanced Report Manager for Microsoft Dynamics™ RMS

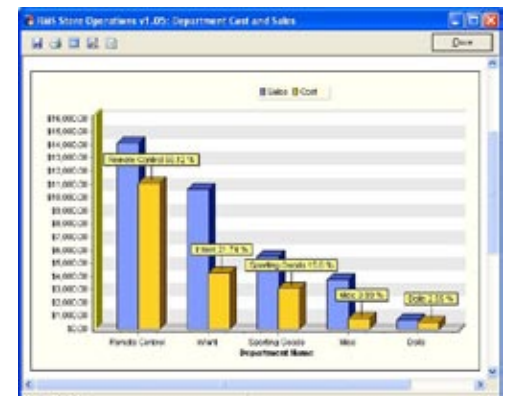

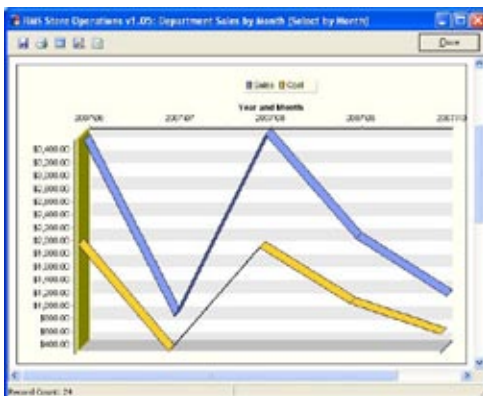

Tri-City Retail Systems has developed an Advanced Report Manager (ARM) add-on software application that takes the data in your Microsoft Dynamics™ RMS Database to the next level.

An affordable, easy-to-use solution, ARM for RMS allows you to build comprehensive reports that help in the daily analysis of your business data.

The Advanced Report Manager comes with 40 preconfigured reports that significantly enhance the standard reporting capabilities of Microsoft Dynamics RMS.

With the ARM for RMS, you can quickly and easily modify existing reports, create new reports on the fly, and archive your reports for future use. In addition, you can generate colorful line, bar and pie charts to graphically represent your output.

## A New Way to Generate Custom Reports Using Your Microsoft Dynamics™ RMS Data

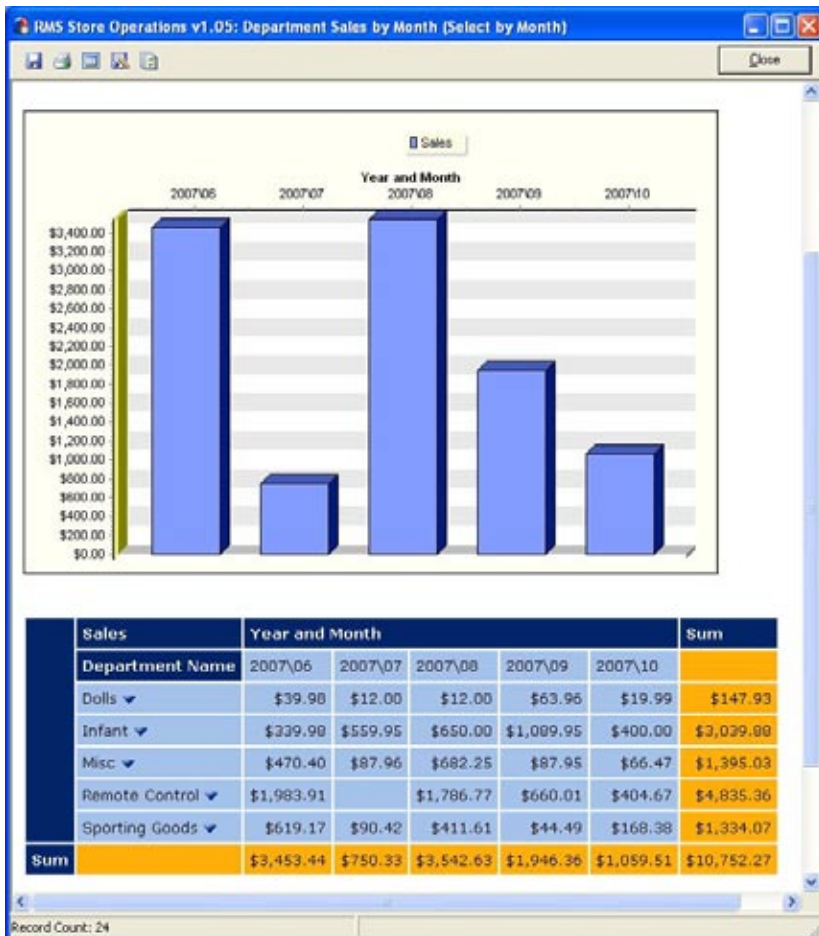

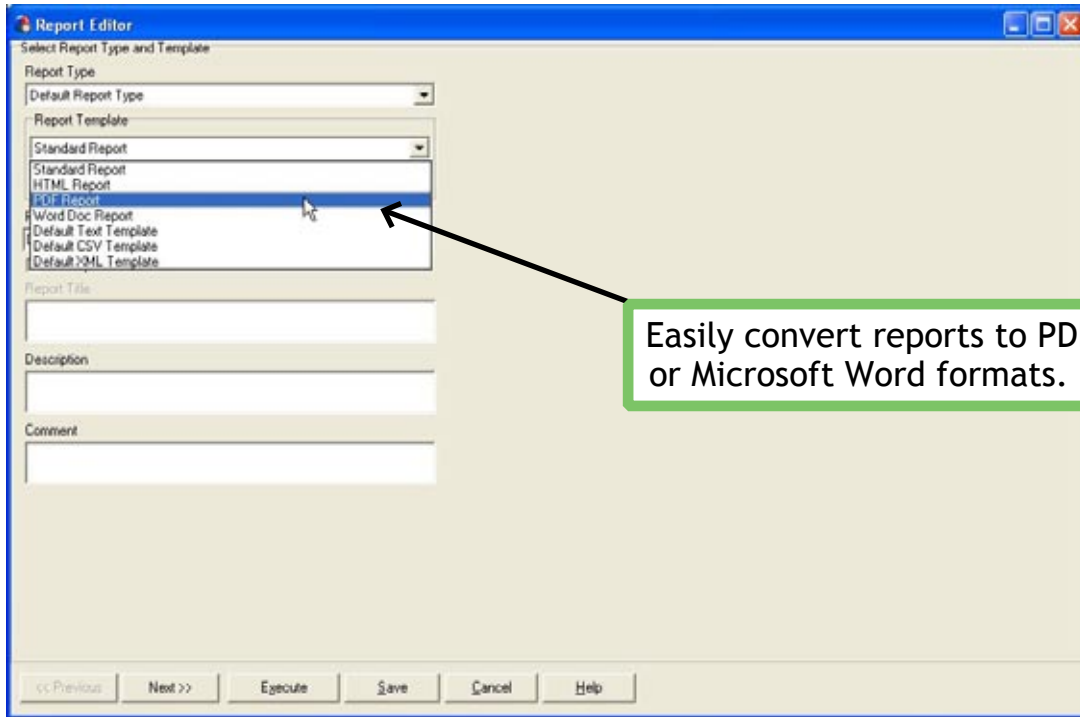

### Edit Reports and Set Criteria on the Fly

The ARM Report Editor allows you to set the criteria for your reports and identify what type of report you want to run.

After you have set your criteria and executed the report, you have access to full filter capabilities to pinpoint specific data.

## Export Report Options

## Cross-Tab Reporting

With the ARM tool, you can generate cross-tab reports enabling you to view data side-by-side versus having to run separate reports to compare data. For example, compare sales data across multiple months/years to review seasonality performance.

ARM report data is real-time and interactive. Drill down directly from the onscreen report, for example clicking on the dropdown arrow next to a Department drills down to the Category level.

## Optional Upgrades for the Advanced Report Manager

### Web Report Server

Get web access to ARM for RMS reports by implementing the optional Web Server for ARM. Your management team will get the information they need when they need it. When you are out of the office, log onto the internet and run ARM reports just like you are sitting at your desk.

### Report Scheduler

The Scheduler for ARM allows you to automatically run reports at regular intervals or at a specific pre-determined time. Ensure that end-of-period reports are generated consistently, whether you are in the office or not.
